Education

Institute of Aeronautical Engineering, Hyderabad, Telangana
B.Tech in Computer Science (AI & ML), CGPA: 9.17 / 10

Sep 2023 – Aug 2027
(Expected)

Experience

RAG Data Intern, GDOT Contractor

Sep 2025 – Nov 2025

- Structured **5,000+ pages** of engineering documents (bridge manuals, specifications) into page-level **JSON schemas**, enabling efficient document retrieval for a **RAG-based knowledge pipeline**.
- Automated PDF data extraction using **Python**, **PyMuPDF**, and **pdfplumber**, replacing manual formatting workflows and reducing document processing time by **~80%**.
- Built modules for an automated infographic generator that converts structured JSON into narrated explainer videos using **LLM storyboards**, **Manim**, **Edge TTS**, and **FFmpeg**.

Projects

Campus Assessment & Attendance Platform | React, Node.js, MongoDB, Redis | Live | 🌐

May 2025 – Present

- Developed and deployed a campus platform on **DigitalOcean** serving **2,000+ daily users** and **50K+ monthly pageviews**, supporting QR attendance, coding assessments, and monitored quizzes.
- Implemented rotating **QR-based attendance** with 6-hour regeneration cycles, preventing proxy check-ins and reducing manual attendance tracking for **~2,000 students**.
- Integrated **Judge0** for sandboxed code execution with **Redis caching**, and automated hidden test-case generation using **LLMs** with validation retry loops.
- Engineered **auto-scaling infrastructure** using the DigitalOcean API to dynamically spin up/down droplets based on CPU thresholds during peak assessment loads.

Bulk Messaging & Campaign Platform | FastAPI, React, PostgreSQL, WebSockets | Live | 🌐

Dec 2025 – Feb 2026

- Developed a campaign orchestration platform using **FastAPI** that ingests CSV datasets, validates schemas, generates templates, and dispatches messages via **WhatsApp** and **Email APIs**.
- Designed a row-level execution pipeline with delivery logging in **PostgreSQL** for message tracking and selective retry of failed deliveries.
- Implemented real-time campaign monitoring using **WebSockets** to track delivery status during large message batches.

Technical Skills

- Languages:** Java, JavaScript, Python, SQL
- Frameworks & Libraries:** React, Node.js, Express.js, Tailwind CSS
- Databases & Caching:** PostgreSQL, MongoDB, Redis
- Tools & Platforms:** Git, Docker, Linux, DigitalOcean

Leadership Experience

Programming Co-Lead, Google Developer Groups on Campus (GDGC), IARE

Oct 2025 – Present

- Organized coding workshops and hackathons for **100+ students**, mentoring them in programming and problem-solving.
- Built the official **GDGC website** and an events/quiz platform with automated submissions and **tab-switch detection**.

Web Developer, TEDxIARE

Feb 2025 – Apr 2025

- Developed and deployed the official **TEDxIARE** website with responsive UI and event registration.
- Designed speaker showcase pages and event schedule layouts using a **mobile-first responsive design approach**.

Achievements

- 1st Place — Rs.20K Prize**, AminoVerse Hackathon (Mahindra University): Built **TrovoGPT**, an AI platform for protein analysis during a 48-hour hackathon (50+ participating teams).
- 2nd Runner-Up — Top 3 of 500+ Teams**, VJ Hackathon (VNRVJIET): Developed **Vyoma**, a browser-based VR therapy platform for anxiety management.
- Solved **500+ DSA problems** across **LeetCode** (300+) and **GeeksforGeeks** (200+).
- Earned **5-Star Python** and **3-Star Java, SQL** ratings on **HackerRank**.
